

eFINForms

Populate, Validate and File FERC Forms in XBRL Format (Order 859)

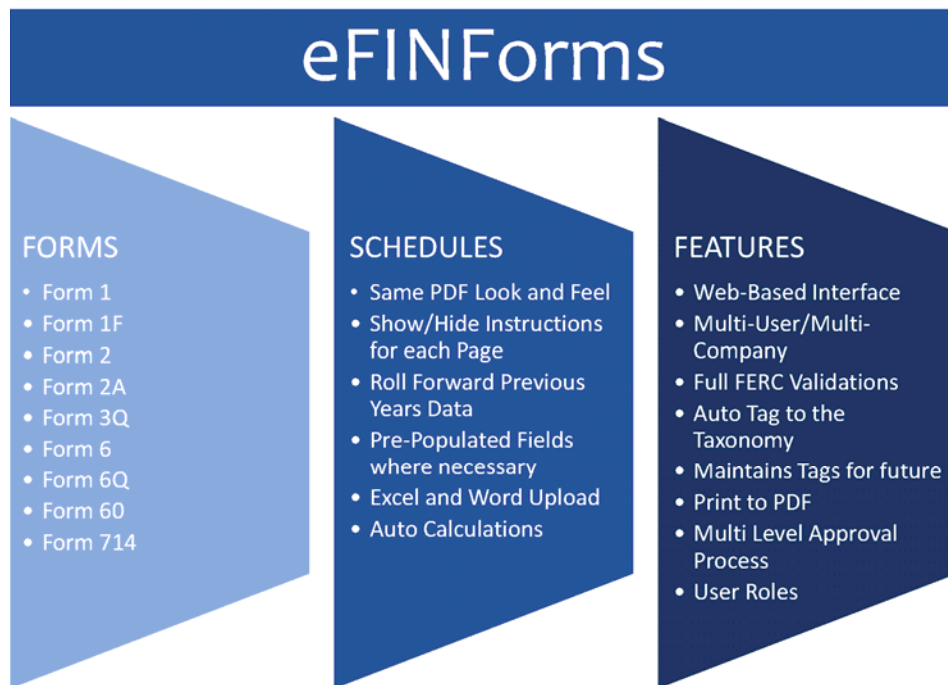

Systemtrends **eFINForms** creates, manages and submits FERC financial Forms (Form 1, 1F, 2, 2A, 3Q, 6, 6Q, 60 and 714) and generates the XBRL format under FERCs new requirement in Order 859.

eFINForms is an easy to use web-based application designed for both single filings and multiple users filing for multiple entities. **eFINForms** maintains the look and feel of the former FOX PRO application helping streamline the transition to the new XBRL requirement

eFINForms also provides several ways to compile data by: (1) importing original excel files to minimize the burden of reformatting; (2) Contains a Copy Forward feature that provides a quick and easy way to use data from a previous quarter; and (3) Bulk upload feature to map data points automatically.

eFINForms contains a full set of validation checks and auto-calculations through all aspects of the schedules. The software provides assurance of mistake-free filings.

eFINForms software will do the tagging to the XBRL Taxonomy automatically so users will not be required to learn or interact with another layer of setting up the data. The application submits the XBRL file directly to FERC using a secure data transmission.

eFINForms software features include:

- Population of data from previous quarter filings
- Calculation of column totals automatically
- Easy integration with backend excel files
- Footnotes dashboard for easy management
- Validation and business rule checks
- User defined roles and Multi-level Approval process
- Import/Export excel templates and data
- Securely submits directly to FERC

Let **eFINForms** guide you through the XBRL filing process
