

eFile549

Easily create and manage natural gas form 549D.

Systrends **eFile549** is a software solution for filing and managing FERC's 549D PDF form. 549D is a quarterly report, required by FERC, that natural gas companies must eFile to report storage and transportation transactions. **eFile549** is an easy-to-use program that converts Excel spreadsheets or XML into FERC's 549D PDF form. **eFile549** automates the process of completing the form according to FERC requirements, eliminating the lengthy process of entering multiple contracts and shipper transactions; the program validates the data to reduce filing errors, generates reports, and archives each PDF form.

eFile549 is web-based software, hosted by Systrends, to which users log in to create and manage their 549D forms. **eFile549** pricing is based on cooperative pricing tiers; the tiers are based on the cumulative contracts of every company using the service. Pricing is determined by the total number of chargeable contracts that flow through the service; the more companies using the service, the lower the cost for all users. If a customer would rather have Systrends generate the filing, that option is also available for a

eFile549 features include:

- Web-based application
- Multiple company filing
- Data validation
- Data error report
- Filing library
- Contract and transaction filing summary
- Filing usage report

Systrends makes sure our eFiling software products comply with changing FERC requirements. Along with **eFile549**, Systrends has **eFileEQR** (converts quarterly report spreadsheets to FERC-defined EQR XML).

Other Systrends products include our eTariff software line that provides **eTariffManager** (converts energy tariffs to XML and provides comprehensive tariff management) and four optional add-ons: **eTariffLoader** (imports previously filed XML into eTariffManager); **eTariffWeb** (transfers tariff documents from eTariffManager to a company content management system or public website); **eTariffCompliance** (provides a full-featured Governance Risk Compliance system for impact analysis); and **eTariffApp** (sends tariff documents directly from FERC's eTariff Viewer to an iPad).

Let Systrends guide you through the eFiling process.
