

# eTariffWeb

## Easily Upload, View, and Export Tariff Documents

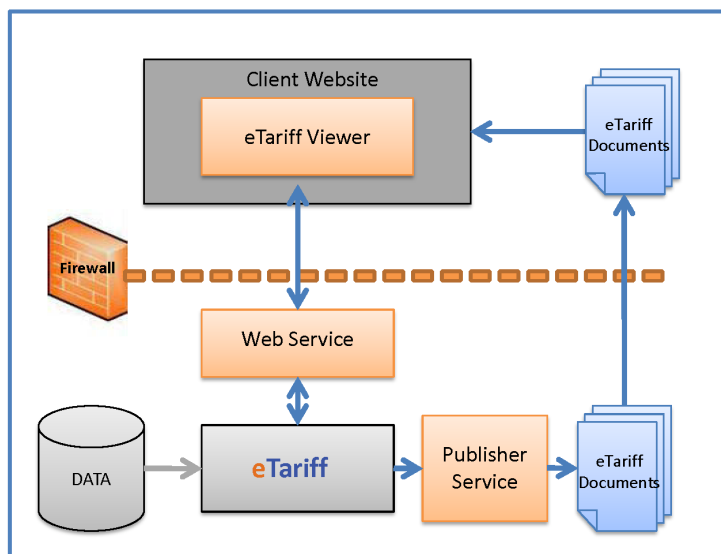

Systrends **eTariffWeb** is an add-on application to our **eTariffManager** product that provides read-only access to tariffs on your company's content management system (CMS) or external website.

This application offers an intuitive user interface for searching and viewing the current effective language of your public tariffs and filings, and fulfills compliance requirements for publicly listing tariffs on the Internet.

**eTariffWeb** improves your workflow by eliminating the manual process of recreating and uploading entire tariff documents to your CMS or website.

Three components make up **eTariffWeb**:

1. The first component, the publisher service, pulls tariffs, filings, and related documents from your eTariff database.
2. The second component, the web service, transfers the documents to your company CMS or website.
3. The third component, the viewer, provides the user interface to search, review, and export documents from your company CMS or website.

**eTariffWeb** features include:

- Compatibility with any content management system or website
- Automatic updates of newly filed tariffs
- Search feature to locate any portion of or phrase in a document
- Display of properties, content, and relationships between tariffs, filings, and dockets
- Export feature to download a tariff in PDF or Word format

Along with our **eTariffWeb** add-on, **eTariffManager** has three additional applications to support your tariff management needs: **eTariffLoader** (imports previously filed XML into eTariffManager); **eTariffCompliance** (provides a full-featured Governance Risk Compliance system for impact analysis); and **eTariffApp** (sends tariff documents directly from FERC's eTariff Viewer to an iPad). Systrends makes sure our software products comply with changing FERC requirements. Other software offerings based on FERC filing requirements include: **eFile549** (converts spreadsheets to XML and PDF for 549D filings); and **eFileEQR** (converts quarterly report spreadsheets to FERC-defined EQR XML). Coming soon will be new software for FERCs Form 1 and Q3 reporting which will be changing to XML.

Let **eTariffManager** guide you through the tariff management process.
